

Making **sun protection** easier together.

Remote control of awnings and Venetian blinds:
with BECKER.

BECKER
Together it's easier.

Enjoy the summer

Control your awnings and Venetian blinds with BECKER

Imagine a bright, sunny day – and then suddenly dark clouds filling the sky. But instead of rushing outside or home to retract your awning you stay calm and relaxed. As everything has already been taken care of, just like your Venetian blinds – automatically controlled by the Centronic SunWindSet – from BECKER.

- Easy programming due to textual support
- Power reserve in the event of power failure
- Universal application for outdoor sun protection
- Automatic sunshade function can be deactivated

Your authorized dealer:

At the touch of a button

Effortlessly operate your awnings and Venetian blinds at the touch of a button. Moreover, the threshold value setting ensures the awning is not constantly extended and retracted when the weather is a mix of sunshine and clouds.

Reliable wireless connection

Neither mobile phones nor other electronic devices interfere with the correct functioning of your Venetian blind or awning drives – as they operate on a different wavelength. And thus protect your home reliably against the sun's harmful rays and heat.

Safety and longevity

A strong breeze or the first raindrops? The signal for your awning to automatically seek shelter and retract perfectly. This keeps your awning in pristine condition – and provides the comfort you need to relax.
